

Avanish Gupta Achievements

ReservesAI

- Owned the Test Harness capability end-to-end to validate document classification at scale (repeatable runs, job history, clear accuracy reporting, and downloadable results), enabling faster and safer iteration.
- Built an internal accelerator tool for classification experimentation to shorten the feedback loop for improving classification strategies.
- Co-shaped the classification and extraction approach with the team to ensure consistent outcomes.
- Explored an early feasibility POC for model-based classification and shared learnings with the team through ongoing knowledge-sharing sessions on practical AI/ML topics.

Security Vulnerabilities Fixes

- Took ownership to resolve security vulnerabilities across repositories under our team's ownership.
- Drove remediation work through completion (implementation, verification, and PR closure), reducing the outstanding backlog and strengthening our security posture.
- Coordinated across teams as needed to unblock dependencies and keep remediation work moving without disrupting delivery.

FreddieMac Workflow - Kong Migration

- Contributed to migrating FreddieMac services to Kong, supporting the transition from legacy gateway definitions to Kong-based routing/configuration and improving standardization.
- Supported end-to-end integration readiness during the migration to ensure stable behavior across the workflow.
- Ramped up quickly on the FreddieMac workflow end-to-end, enabling timely contribution to production issues when needed.

DMSUI

- Contributed to email generation capabilities, improving operational workflows and downstream communication.
- Delivered end-to-end support for bulk operations (Bulk Update / Bulk Edit / Bulk Delete), improving efficiency for high-volume operational workflows.
- Partnered with the team to stabilize and refine the flow, addressing issues discovered during testing and rollout.

Cashmovement

- Contributed to Beneficiary Address feature development and supported the team with early-stage enhancements and fixes.

Trainings, POCs, and Knowledge Sharing

- Attended internal trainings and self-upskilled on RAG, Ollama, MCP, and Cursor.
- Utilized Cursor AI to build POCs, MCP servers, and supporting devtools that helped speed up development workflows.
- Conducted knowledge-sharing sessions on practical AI/ML topics to improve team capability.

Recognition

- Awarded with Hi5 Recognition Award (27 March 2025) within my first year of contributing to the organization.

Collaboration & Communication

Additionally, I collaborated with cross-functional teams by proactively providing support when needed. I ensured stakeholder alignment through consistent updates and context-sharing, helping bridge gaps across workstreams (including time-sensitive items such as security remediation).
