

Management Trainee Interview

30 Jul 2019 ...

Anonymous employee

Calcutta

✓ Accepted offer ✓ Positive experience ✗ Difficult interview

Application

I applied through a recruiter. The process took 3 months. I interviewed at MSTC [Calcutta]

Interview

Mode of Selection is a three-tier process. A preliminary written test is conducted throughout India. Candidates clearing written test are called for further process at Head office Kolkata. Documents verification and Group Discussion is conducted and selected candidates are finally called for the interview. Candidates clearing above are offered offer letter provided they fulfill basic medical requirements.

Interview questions [1]

Question 1

Questions related to graduation, previous work experience, about current happenings.

Answer question →

- Tell me about yourself?
- Mostly about your project in Btech/Mtech.

Interview questions [2]

Question 1

what is your favourite subject ? (I answered as digital electronics) follow up : why do you think we prefer digital electronics today rather than analog?

1 Answer →

Question 2

tell difference between ASIC and FPGA? how does communication occurs when a phone rings?

-
- interview was moderate they first asked about different projects from my resume and major project from final year electronics
- Fav subject -> questions -> project questions
- What do you know about bel

Application

The process took 1 day. I interviewed at Bharat Electronics (Gāndhīnagar, Gujarat) in Feb 2025

Interview

The interview began with basic HR questions, including an introduction, habits, and background. The panel then asked about favorite CS subjects, leading to basic questions on DBMS, OS, and DSA. This was followed by a discussion on projects. The interview lasted around 20-25 minutes, and the panel was very helpful.

Interview questions [1]

Question 1

Basics of DBMS(ACID Properties, normalization), OS(examples of real time os), and DSA(prime number), OOPS(Pillars, function overriding etc).

- Usually panel of 5 members
- Final year project and technical questions in case of freshers
- Tell me about yourself
- Why MSTC, they make you comfortable then they can increase the level of difficulty of questions
- Questions were related to technical concepts focus on fundamentals
- 20 mins(HR + technical)
- HR -> Practical technical questions
- HR(If one of your colleagues is not doing the work in a correct way How will you respond to that situation) [45mins]. Panel of 3 members, 2 technical: focused on final year project One was asking HR
- The panel was very friendly,if you stuck somewhere in the middle of answer they will help you.Just brush up the basics of all subjects especially digital,microwave and communications.Don't ever try to bluff them..if don't know the answer just say clearly
- The first question was why I wanted to leave my Mtech and join Bel. And why specifically bel why not any other private company. then they asked about my btech project and asked few question related to it. then they asked about my favorite subjects

Interview

Shortlisting through GATE 2013 score followed by interview. Interview was mainly focussed on whether I'll join the company without any second thoughts if a call letter is given, whether I'm eager to learn new work, like radars even though I'm from electronics background and not communication, whether I'm ready to relocate anywhere. A few technical questions were asked like B.E. final year project, ADC, DAC, PIN diodes. However they didn't stress much on the technical questions. Results awaited

Interview questions [1]

Question 1

- Are you ready to join without any second thoughts?
- Which field of electronics you are strong, About yourself

- Q3. In which field do you worked in your last job
-

Given your lack of experience in systems, do you anticipate facing challenges during this internship?

Ans. I come with a strong foundation in software development and a proven ability to learn new domains quickly, so I don't see limited prior systems work as a barrier. I expect a short ramp-up period to internal tools and architecture, but my strengths—problem-solving, reading design docs, and hands-on debugging—let me contribute meaningfully within weeks.

My plan to mitigate any gaps: enroll in focused resources (core systems concepts, relevant protocols), pair with a mentor, and set weekly learning goals with deliverable milestones. I will prioritize practical experiments (small prototypes) to translate theory into results and ask targeted questions to accelerate impact.
